Platform Engineer — Developer Tooling, Scaffolding & Golden Paths

Platform engineer with 6+ years building self-service developer tooling, project scaffolding, and CI/CD platforms adopted org-wide, reducing manual toil and standardizing golden paths across engineering teams.

Technical Stack & Proficiencies

- **Platform:** CLI/project scaffolding, pnpm dlx templates, self-service tooling
- **CI/CD:** GitLab CI templating, Docker, sorry-cypress, build-test-deploy pipelines
- **AI:** Claude Code, Playwright-MCP, MCP-SDK, Anthropic-SDK
- **Languages:** TypeScript/Node, SQL, Bash, Rust, Swift
- **DB:** SQL, Mongo, Snowflake, Dynamo
- **Systems:** Linux (Arch, Nix, Alpine, Debian), Git, concurrency/locking

Career Experience

Centene

Lead Applications Software Engineer in Test

Arlington, Virginia -> Remote

February 2020 – Present

- Led test automation efforts across Centene's web platform, directly guiding 4-5 engineers at a time (dozens over 6 years) and running recurring technical brown-bag sessions on Git workflows and test tooling.
- Built an agentic pipeline (Playwright MCP) as a shared internal platform capability — turning requirements docs and legacy test cases into generated, self-healing test automation available to every team rather than a one-off script.
- Designed and shipped XP_CYTEST, a component-testing module baked directly into the org's `pnpm dlx` project scaffolding as a golden-path default (not opt-in) — adopted by 15+ teams and growing, with a templated GitLab CI layer and self-service config flags.
- Built a CLI scaffolding tool that generates a fully configured, multi-domain Playwright test suite (per-domain env generation, cached auth sessions) in minutes instead of hours — scaled to 28+ brand domains, later generalized and published as testwright.
- Rebuilt the org's shared Cypress CI/CD platform: configurable versioning, pre-built Docker images, sorry-cypress parallelization, and templated GitLab jobs exposing self-service flags — plus migrating tests in-repo to eliminate version skew for every consuming team.
- Automated Jira ticket-status transitions from GitLab CI events (branch created, MR opened, deploy stages), keeping ticket state accurate without manual updates.

FINRA

Software Development Engineer in Test

Rockville, Maryland

April 2018 – January 2020

- Automated end-to-end testing using Java, Selenium, JDBC, and JUnit.
- Automated SQL regression testing validating data integrity through CRUD operations.
- Wrote and executed end-to-end test cases and documented application issues in Jira.

Harmonia Holdings LLC.

Quality Assurance Engineer

Blacksburg, Virginia

March 2016 – March 2018

- Acquired Public Trust Clearance with the Department of Agriculture.
- Automated testing using Java, Selenium, SQL, JMeter, and QTest.

Mountain State Information Systems

Software Engineering Intern

Radford, Virginia

June 2015 – March 2016

- Web app development and maintenance: HTML, CSS, JavaScript, PHP, FTP.
- Automated cost comparisons and visualized data with Visual Basic macros.

Projects

- **testwright** — Generalized an internal multi-domain test-scaffolding platform (originally scaled to 28+ brand domains) into a published npm package — CLI-driven environment generation, session caching, and CI wiring as reusable platform tooling, not one-off scripts.
- **agentic-testing** — Personal rebuild of a self-healing agentic pipeline (requirements -> test generation -> execution -> self-healing -> reporting), packaged as reusable pipeline tooling rather than a one-off script.
- **organ-eyes** — CLI tool (TypeScript/Bun) for composing reusable, linkable context fragments into a single document for AI coding assistants — internal developer-experience tooling that standardizes context instead of rewriting boilerplate per project.
- **qadashboard** — Web dashboard (TypeScript) giving teams self-service visibility into QA automation progress, deployed versions, and ticket status across projects.

Education

B.S., Computer Science – Radford University – GPA: 3.73

Graduated December 2015
