Lead SDET — Agentic Test Automation & Testing Platforms

Test automation leader with 6+ years building developer-facing testing platforms and CI/CD infrastructure across large-scale web and data systems, most recently architecting agentic AI-driven testing pipelines with Playwright MCP.

Technical Stack & Proficiencies

- **Testing:** Playwright, Cypress, Jest, Mocha, sorry-cypress, Deque/AXE
- **AI:** Claude Code, Playwright-MCP, MCP-SDK, Anthropic-SDK
- **Full Stack:** TypeScript/Node, React, Vite, Fastify
- **DB:** SQL, Mongo, Snowflake, Dynamo
- **CI/CD:** GitLab, Git, Bash, Docker
- **OS:** macOS, Linux, Arch, Nix, Alpine, Debian

Career Experience

Centene

Arlington, Virginia -> Remote

Lead Applications Software Engineer in Test

February 2020 – Present

- Led test automation efforts across Centene's web platform, directly guiding 4-5 engineers at a time (dozens over 6 years) and running recurring technical brown-bag sessions on Git workflows and test tooling.
- Architected an agentic pipeline (Playwright MCP) that converts requirements docs and legacy test cases into a deduplicated, consistently-structured test suite, auto-generates Playwright automation, and self-heals broken tests with human review on unresolved failures.
- Designed XP_CYTEST, a Cypress + MSW component-testing module built into the platform's project scaffolding, letting less-technical QAs test complex UI components (data tables, toggles, search) in isolation pre-deploy — adopted by 15+ teams and growing, shifting bug discovery left of e2e/deploy.
- Built a CLI-driven Playwright framework that scaffolds multi-domain test suites with per-domain env generation and cached authenticated sessions, scaling FE test execution to 28+ brand domains running in parallel (later open-sourced as testwright).
- Led the migration of Cypress e2e tests from a standalone repo into application repos ("in-repo QA"), resolving chronic version-skew issues between test code and app code across the platform.
- Automated a multi-system test workflow (web portal -> MongoDB batch queue -> Linux batch job -> generated PDF) that had been dismissed as "impossible to automate," including automated visual verification of the generated PDF via Playwright + Jest snapshot diffing — enabling dozens of concurrent test runs versus one manual run at a time.
- Built a reversible "test scenario" system for a legacy, app-layer-free SQL stored-procedure engine, replacing ad hoc data mutation with sanctioned, undoable operations — eliminating corrupted shared test data and improving failure traceability.
- Implemented visual regression testing (Cypress + Jest snapshot diffing, Git LFS for baseline storage) as a safety net for subtle UI regressions, with an added script to scrub PII from screenshots as a defense-in-depth measure.
- Automated Jira ticket-status transitions from GitLab CI events (branch created, MR opened, deploy stages), keeping ticket state accurate without manual updates.
- Automated WCAG accessibility static scans and keyboard-navigation testing via Deque/AXE.

FINRA

Rockville, Maryland

Software Development Engineer in Test

April 2018 – January 2020

- Automated end-to-end testing using Java, Selenium, JDBC, and JUnit.
- Automated SQL regression testing validating data integrity through CRUD operations.
- Wrote and executed end-to-end test cases and documented application issues in Jira.

Harmonia Holdings LLC.

Blacksburg, Virginia

Quality Assurance Engineer

March 2016 – March 2018

- Acquired Public Trust Clearance with the Department of Agriculture.
- Automated testing using Java, Selenium, SQL, JMeter, and QTest.

Mountain State Information Systems

Radford, Virginia

Software Engineering Intern

June 2015 – March 2016

- Web app development and maintenance: HTML, CSS, JavaScript, PHP, FTP.
- Automated cost comparisons and visualized data with Visual Basic macros.

Projects

- **testwright** — Published npm package generalizing an internal multi-domain Playwright framework (originally scaled to 28+ brand domains): CLI scaffolding, per-domain env generation, cached authenticated sessions, and common-vs-targeted test categorization.
- **agentic-testing** — Personal rebuild of an agentic Playwright MCP workflow covering requirements -> test generation -> execution -> self-healing -> reporting.

Education

B.S., Computer Science – Radford University – GPA: 3.73

Graduated December 2015
